

Q.1 Reverse a string without slicing : with slicing

>> "Hello World"

Ans: s = "Hello World"

print (" ".join (reversed (s)))

O/P : dlrow olleH

ae = "Hello World"

print (ae)

ae[::-1]

O/P : dlrow olleH

Q.2 Count words in a sentence :

>> "A Quick Brown Fox Jump Over
the Lazy Dog"

Ans: s = ("A Quick Brown Fox Jump Over
the Lazy Dog")
print (len (s.split ()))

O/P : 9

Q.3 Remove duplicate characters.

>> "Carrot"

Ans:

s = "Carrot"

print (" ".join (set (s)))

O/P : 'Carot'

Q.4. What is difference betⁿ list and set?

Ans:

List	Set
Ordered	Unordered
Indexed	Unindexed
Slower	Faster
Duplicates allowed	No duplicates allowed

Q.5 Can sets contains lists? If yes How
If no why?

Ans: No

Why - A set cannot contain a list because a list is changeable.

Q.6 Why sets are faster?

Ans: Because sets use hash table.

Q.7 Diff betⁿ remove() and discard().

- remove() : Remove specific element.

- discard() : It also removes specific element.

• If the element is not found, it does not give an error.

Q.8 How many methods to insert elements in the list? Total Method?

Ans:

- Methods to insert elements in a list:

1. append
2. insert
3. extend

- Total Method:

1. remove
2. pop()
3. clear()
4. del()
5. index()
6. copy()

Q.9 How many methods to delete elements in the list? Total Method?

Ans:

- Methods to delete elements in a list:

1. remove()
2. del()
3. pop()
4. clear()

- Total Method:

1. append()
2. insert()
3. extend()
4. index()
5. copy()

Q.10. How many Operators in Python. Write their name in Explain?

Ans:

1. Assignment Operator - [=, +=, -=, *=, /=]
2. Arithmetic Operator - [+ , -, *, //, %, **, ^]
3. Comparison Operator - [==, !=, >=, <=, <, >]
4. Logical Operator - [and, or, not]
5. Identity Operator - [is, is not]
6. Membership Operator - [in, not in]

Q.11. Write precedence Rule of arithmetic in Python?

Ans:

Q.12. How to sort elements in list using slicing method?

>> [5, 11, 14, 7, 8, 3, 2, 5, 9]

Ans:

```
l = [5, 11, 14, 7, 8, 3, 2, 5, 9]
```

```
l.sort()
```

```
print(l)
```

O/P : [2, 3, 5, 5, 7, 8, 9, 11, 14]

Q.13. What is Dictionary?

Ans: A dictionary is a collection of key-value pairs.

Q.14 How many methods to create dictionary?

Ans:

Method 1 - Using {}

Method 2 - Using dict()

Method 3 - Empty dictionary

Q.15 How many methods to access value in dictionary?

Ans:

```
student = {"name": "Dnyanu",
            "age": 19}
```

```
print(student["name"])
```

```
print(d.get("age"))
```

O/P: Dnyanu
19

Q.16 How many methods to delete elements in dictionary?

Ans:

del()

clear()

pop()

popitems()

Q.17 How to perform mathematical operations in sets write method name?

Ans:

union () ✓

intersection () ✓

Q.20 Difference between sets and dictionary?

Ans:

Set	Dictionary
Stores value	Stores key-value pairs
{ }	Used {key: value}
Mutable ✓	Mutable ✓
